

## **Press Release**

FOR IMMEDIATE RELEASE: December 11, 2008

### **DIGITAL EARTH ANNOUNCES THE SUCCESSFUL SALE OF LISLE GRAVITY INC**

**Denver, Colorado** – Digital Earth Inc. today announced the successful sale of Lisle Gravity Inc. (Lisle) of Denver, Colorado to GETECH Group (GETECH) of Leeds, England.

Lisle has been the foremost provider of US gravity data to the oil, gas and minerals industries for many decades and with approximately 3 million gravity stations is the largest commercial library of onshore US gravity data.

GETECH is considered to be one of the leading service companies supplying exploration data, services and studies to the oil, gas and minerals industries. Combined with Lisle they will achieve a truly dominate position in the global gravity data market.

Digital Earth successfully represented Lisle throughout the entire sale initiation and negotiation process. "We were very pleased to have been able to successfully complete this sale despite the current market uncertainties", stated John Redfern of Digital Earth.

"It's a testament to Digital Earth's perseverance", added George Lisle, President of Lisle Gravity. "Digital Earth stuck with us through a very long process, never charged extra despite the delays, and were able to complete the sale despite the recent volatility in the oil price, exchanges rates and financial markets."
